

AIMday™ Aerospace Sustainability

Poised for continued growth after its recovery from the pandemic, the global aerospace industry must evolve to meet sustainability challenges. By leveraging new ideas and opportunities and working collaboratively, Canada’s aerospace industry can lead the charge towards net zero – an imperative for the global industry and Canada’s Aviation Climate Action Plan. This event will offer organizations a unique opportunity to chart new paths, develop

new relationships, discuss and refine environmentally sustainable ideas and practices, and reimagine how to address the industry’s overall carbon footprint.

Academic Industry Meeting day, known as AIMday, is a unique opportunity where academic experts respond to a question or challenge from organizations. In each one-hour roundtable:

- Explore potential solutions to your organization’s challenge or question with respect to sustainability in aerospace, aviation, space or related fields.
- Cultivate organization/academic collaborations for maximum real-world impact.
- Access state-of-the-art knowledge, ideas, technology and insights.

About AIMday

Centered on a day of one-hour workshops addressing questions from organizations, AIMday is a highly effective program that enables organizations and university-based scientists to connect and bring world-class research to life. By matching an organization's need for new knowledge to academic expertise, AIMday brings understanding and new perspectives to real-world problems.

Established in 2008 at Uppsala University, Sweden, AIMday has been implemented and refined by universities from around the world, including the U.K. (Newcastle University, Queen's University Belfast, University of Cambridge, University of Edinburgh, University of Oxford), Brazil (Federal University of Pernambuco, Federal University of Rio Grande do Sul, University of São Paulo), Sweden (Umeå University) and Canada (Toronto Metropolitan University, University of Saskatchewan).

AIMday Benefits to Industry

Expertise

Organization questions form the meeting day agenda. The AIMday team then matches these questions to academic expertise. The broad mix of experts can provide a range of perspectives and new avenues to solving problems. Many collaborative projects begin during this exchange of knowledge and ideas.

Streamlined Meetings

AIMday Aerospace Sustainability dedicates an hour to each question through a small workshop group of seven to 12 people, pre-selected for this question, including organization representatives and researchers from various disciplines.

Connect with World-Class Researchers

Connect with academic researchers across different disciplines and with other organizations. Identify experts to explore research collaborations that address your most pressing challenges in aerospace sustainability.

AIMday FAQs

Who can pose questions at this AIMday event?

We welcome questions from companies of any size, and other organizations.

What kind of questions can I ask?

The questions can be very wide or very narrow in scope. We don't restrict the question formulation; you and your organization decide the character of the question. Upon request, we can help you formulate your problem into one or more questions.

How many questions can I ask?

Each organization may ask a maximum of five questions. Experience has shown that the best results are yielded when at least two representatives from your organization attend the workshop discussions.

Will other organizations take part in our workshop?

AIMday is an opportunity to connect with world-class researchers and have them focus exclusively and confidentially on your challenges. If you would like to open the workshop to other organizations in order to address systemic challenges, please let us know when you submit your question and we will make the necessary arrangements.
